30th May 2025

Job Opportunity: Horticulture & Botanical Garden Specialist

Location: [Migude Green farms, Milo- Vigwaza]

Employment Type: Consultancy, Maximum-Term Contract with renewal based on performance

Application Deadline: [30th June 2025]

About Migude Green Farms

Migude Green Farms is a pioneer in sustainable agriculture and organic food production in Tanzania. Beyond our high-quality dairy, vegetable, and meat products, we are expanding into eco-tourism and horticultural innovation. Our vision includes transforming rural spaces into vibrant hubs of health, beauty, and education through botanical gardens and organic farming systems.

We are seeking a visionary Horticulture & Botanical Garden Specialist to lead the design, development, and management of a multi-functional botanical garden and organic farming initiative that integrates commercial vegetable and spice production, training programs, and a resort-style experience for lodgers, visitors, and health retreat participants.

Key Responsibilities

- Design and construct low-cost greenhouses using locally available materials.
- Develop and manage a water recycling system to support sustainable gardening and reduce operational costs.
- Create a visually appealing botanical garden integrated with vegetables, spices, herbs, and flowers to enhance eco-tourism experiences.
- Plan and deliver a short training program on organic farming, packaging, distribution, and market access.
- Understand local market trends and advise crop planning based on Tanzanian household and tourism-related vegetable needs.

- Maintain and enhance the company's innovation and competitiveness in healthy food production.
- Collaborate with hospitality and lodge teams to ensure the garden contributes to an attractive, serene, and educational rural resort environment.
- Leverage knowledge of healthy diet recipes and local medicinal plants to support wellness-based tourism and farm-to-table offerings.

Qualifications and Skills

- Degree or diploma in Horticulture, Agronomy, Environmental Design, or a related field.
- Proven experience in designing and managing eco-farms, botanical gardens, or sustainable horticulture projects.
- Technical skills in irrigation, greenhouse construction, and organic farming systems.
- Creative eye for landscape design and visitor experience planning.
- Strong communication and presentation skills; ability to lead training sessions and community engagement.
- Deep understanding of Tanzania's agricultural and tourism markets.
- Passionate about sustainability, health, and rural development.
- Knowledge of nutrition and healthy meal planning is a strong advantage.

What We Offer

- A chance to build a flagship eco-horticulture project in Tanzania
- Permanent employment with performance-based growth opportunities
- Competitive salary and housing support (in Migude)
- Opportunity to shape a resort-like agro-education experience
- A collaborative, purpose-driven workplace focused on innovation and impact
