Dear Readers,

In this issue of TELE-audiovision we'll show you a number of devices that utilize more than one tuner. And that's how it should be; for the viewer it doesn't matter at all what path his favorite channels take to get to his TV. What's nice is that now signal analyzers with two tuners are becoming more and more popular; and with these instruments, there are often configurations where two tuners would be able to provide excellent services.

But having more than one tuner is not all that matters; you still have to be able to get the best out of it that you can. That's why, in this issue of TELE-audiovision we are introducing a signal analyzer that can do everything that you can possibly think of. Even more remarkable is yet another instrument, an amplifier, that can do far more

than was ever thought possible: the output signal is much better than the original input signal. Yes, miracles do happen, you just have to take technology to levels it has never gone before!
